

EWF-European Adhesive Bonder – EAB

Training Center for Adhesive Bonding Technology

Saw blade with bonded on cutting segments for cutting granite.

The Adhesive Bonder training course gives participants an understanding of the technical aspects and importance of their particular work procedures. Therefore, it enables them to carry out bonding work independently and professionally. The course provides a fundamental knowledge of adhesive bonding, so allowing the special aspects of adhesive bonding processes to be understood and taken into account in the production.

Course content

Fundamentals

The course starts by introducing fundamental aspects of adhesive bonding technology. A comparison is made between adhesive bonding technology and other joining techniques. The integrity of bonds and the factors that influence the quality of a bond are explained using the concept of bonding forces. Participants acquire a fundamental understanding of the properties of adhesives.

Adhesives

In this section of the course the participants are familiarized with the most important types of adhesives used in industry and learn about the properties of those adhesives and their main

areas of application. Emphasis is put on correct processing and on the curing conditions for different adhesive systems. These aspects are reinforced by practical assignments.

Surface treatment

A surface treatment suitable for adhesive bonding is essential for the functionality and long-term stability of the bond. The course introduces surface treatment techniques that are normally carried out by workers as a direct part of the adhesive bonding process. Practical experiments give participants experience applying these techniques to a variety of substrates. Particular emphasis is put on the use of primers and adhesion promoters.

Certification and accreditation

The Department of Adhesive Bonding Technology and Surfaces is accredited according with DIN EN ISO 9001.

The training courses in adhesive bonding technology are further accredited in accordance with DIN 2304, DIN 6701, EN 17460, EN ISO 21358 und TL A-0023.

The Training Center for Adhesive Bonding Technology has an international reputation for its training courses in adhesive bonding technology and is accredited via DVS-PersZert® in accordance with DIN EN ISO/IEC 17024.

Course participants manufacturing bonded joints.

Test methods

In the practical part of the training, the students produce bonded joints and test them using the practical techniques they have previously learnt in theory. Evaluation of the bond strengths and fracture patterns allows adhesive bond defects and their effects to be recognized, so complementing the theoretical part of the course.

Manufacturing technology

The participants will be introduced in the fundamental aspects of manual and automatic production methods and learn to identify and avoid sources of faults and defects.

Work safety and environmental protection

Participants learn how to recognize potential dangers when working with adhesives and auxiliary materials used in bonding processes. The importance of using protective equipment and wearing protective clothing is highlighted.
